How-to: Boot Commands For Mac

I'm making use of a Logitech USB (model Y-BF37) keyboard directly linked to the pc but no startup essential commands functions.. I seem to end up being incapable to carry out any 'Startup key' sequences (résetting PRAM, boot into recovery mode, boot from CD etc).. I have got tried searching but the common opinion appear to become that any USB keyboard should function.. (The key pad is created for make use of with apple company and provides apples command-key icons on the key nearest the spacebar).

boot commands
